The big screen

Watch movies wherever, whenever, with the portable projector that won't let you down

Portable projectors can be a bit a little hit or miss. It's always a nice idea - you gather friends to sing along to *The Greatest Showman* under the stars (No? Just us?) - but in practice, they often fail to hit the spot. But that's where XGIMI's Halo+ comes in. Leaving no stone unturned, this portable model is a real all-rounder with its sound output (an unbeatable Harman Kardon and Dolby Audio pairing) performing as well as its 1080p FHD picture. Now don't get us wrong, it has a price tag to match, but for the movie buffs, we say it's worth every penny.

Award-winner

Hidden beneath the counter is a water system like you've never seen before

After sweeping the floor at the Red Dot Awards in 2021 with its I-Wall, Zerica prove there's no limits to its creativity as it picked up two more Red Dot Awards this year with its Smart-Top water dispenser. Combining three key elements; a water cooling and boiling unit which is concealed under the sink, an intuitive touchscreen and, of course, a tap, this three-piece suite provides chilled, sparkling and boiling water at the mere tap of a screen.
