

# Technologies for water quality

## **Zerica: intelligent and Made in Italy systems**

Zerica manufactures refrigeration and microfiltered water dispensing systems. Among the company's latest offerings there is **i-Wall**, a solution capable of guaranteeing pure water (fresh, sparkling and ambient) both for drinking and for use in the preparation of meals or beverages. It is a simple and silent system that adapts to any 60 cm kitchen module. A further solution is **Omnia**, a compact product, able to offer cold and sparkling water in a simple way. It guarantees zero maintenance thanks to the Silver Turbo Clean refrigeration system, which keeps the appliance clean. Furthermore, the product is silent, eco-friendly and has a contactless dispensing system. And the Zerica high-pressure system generates a water vortex on the internal walls whenever water is dispensed, so preventing biofilm and residue formation. Zerica's offer also includes **Supra**, a countertop water dispenser for the home or restaurant with an attractive design: it is a customizable, silent solution and is built with recyclable materials. Besides, the company has developed an advanced assistance system to manage remote diagnostic and maintenance interventions on the machines, checking the water purity and managing the energy savings. Finally, Zerica has also committed itself to the creation of an H2O dossier which offers insights into the theme of water and provides suggestions for avoiding waste and safeguarding the environment.
