A total of 26 companies will receive a Smart Label award at this year's HOST exhibition in Milan.

The Smart Label accolade has become a key feature of the biennial show and honours companies credited with "bringing change in their respective sectors" through product innovation.

It takes into account factors such as sustainability, materials and usability when assessing product design.

Story continues below Advertisement

The 26 winners were whittled down from almost 160 nominations by a jury of independent international experts from 157 nominations

45% of the nominations were for foodservice equipment, followed by furniture and tableware (24%) and coffee-tea and bars, coffee machines and vending machines (23%).

Five applications were awarded the Innovation Smart Label, which identifies products with high innovation content featuring a breakthrough in established trends.

Six Green Smart Label awards were assigned to submissions with distinctive eco-sustainability features.

And 15 products were awarded the traditional Smart Label, dedicated to products with particularly unique innovative content.

The official ceremony will be held on Friday 13 October during HOST 2023.

The full list of award-winning companies and products can be viewed below (click to enlarge):
