Zerica presents **Omnia**, the **compact water dispenser able to offer cold and sparkling water** in a simple way (distributed by I&D). The product is completely **Made in Italy** and produced entirely within the company. It guarantees zero maintenance thanks to the **Silver Turbo Clean refrigeration system**, which keeps the system perfectly clean at every draw. Besides, Zerica's high-pressure system generates a vortex of water on the walls with each dispensing, preventing the formation of biofilm or residue. The water is always fresh and safe and easy to manage with the stainless steel refrigeration chamber with bacteriostatic silver welds. Other pluses are: **only 25 cm wide**; large dispensing area that allows user to fill up to three carafes of cold and sparkling water; ultra-quiet, with chassis made strictly of galvanized steel with black anti-scratch coating. In addition, it is possible to transform Omnia into a free-standing system thanks to the coordinated support cabinet in galvanized steel with anti-scratch coating.
